

input: fire_site_data (temperature, humidity, fuel_moisture, slope, distance)

parameters: hot fire-weather temperature (ht), strong wind value (wv), fuel moisture sensitivity (fms), ignition_threshold

climate_conditions
In: temperature, humidity, wind_speed, ht, wv
Out: climate_risk_factor

land_conditions
In: fuel_moisture, slope, fms, ignition_threshold
Out: ignition_probability

wildfire_likelihood
In: climate_fire_probability, ignition_probability
Out: wildfire_probability

Output: wildfire_probability
